

Design Portfolio Website

Project Work Plan — Web Development Assessment

Phase 1

Finalise Brand + Wireframes

Foundation

- Choose brand name, logo concept, and tagline for your design portfolio
- Define 3 product categories (e.g. Branding, UI Design, Motion Graphics)
- Sketch wireframes for all 6 pages — layout, nav, key sections
- Submit wireframe as PDF / handwritten / .io file for teacher approval

Deliverable: Approved wireframe document

Phase 2

Build All 6 Pages (Static)

HTML + CSS

- Page 1 – Home: brand logo, tagline, image carousel/slideshow, intro paragraph, embedded video, nav menu
- Page 2 – Portfolio: project grid, table (4+ rows), ordered list, external hyperlink, images with alt text
- Page 3 – Services: DB admin interface (prepared in Phase 5), service descriptions
- Page 4 – Process: design process timeline, ordered/unordered lists, attractive UI elements
- Page 5 – Contact: contact form, sign-in/sign-up form (JS validation added in Phase 4)
- Page 6 – About: team/brand bio, Acknowledgement of Country, accessibility features, social links
- Create one external CSS file linked across all 6 pages — store assets in a /assets subfolder

Deliverable: All 6 pages rendering correctly with shared CSS

Phase 3

Responsive Design (Mobile, Tablet, Print)

Bootstrap

- Add Bootstrap CDN or local files — link in every page header
- Implement Bootstrap navbar that collapses into a hamburger menu on mobile
- Use Bootstrap grid (col-sm / col-md / col-lg) for all page layouts
- Make images responsive with img-fluid class
- Add a print stylesheet: hide nav, clean typography, show content only
- Test at 375px (mobile), 768px (tablet), and 1280px (desktop) breakpoints

Deliverable: Fully responsive site at all screen sizes

Phase 4

Interactivity (3+ Event Types, 2+ Logic Rules)

JavaScript

- Image carousel on Home page — click arrows (click event) + auto-advance (interval)
- Contact form validation — check required fields on submit, highlight errors (submit + keydown events)
- Show/hide project detail panels on Portfolio page (click toggle logic)
- Text-to-speech button using Web Speech API — reads page content aloud (accessibility)
- Sign-in / sign-up modal with JS field validation (email format, password length)
- Dynamic content update: filter portfolio items by category without page reload

Deliverable: At least 3 event types and 2 logic rules documented

Phase 5

Database — Categories & Products

PHP + MySQL

- Create MySQL database with 2 tables:
- Categories: categoryID (PK, INT AUTO_INCREMENT), categoryName (VARCHAR)
- Products: productID (PK), categoryID (FK), productCode, productName, listPrice
- Insert sample data — 3 categories + at least 5 products per category
- SELECT: display full product list with category names on admin page
- ADD (INSERT): form to add a new product — validates required fields
- DELETE: button per row to remove a product from the database
- MODIFY (UPDATE): edit form pre-filled with current product details
- SORT: ASC / DESC toggle buttons using ORDER BY productName

Deliverable: Working admin UI with all 5 SQL operations visible

Phase 6

Accessibility, Testing & Final Submission

Polish + Submit

- Accessibility audit: high-contrast colour palette, keyboard tab navigation, ARIA labels
- Verify all images have meaningful alt text — update any missing ones
- Confirm text-to-speech button works on at least 2 pages
- Inclusive language review: gender-neutral wording throughout (users, people, visitors)
- Acknowledgement of Country present on Page 6 (About) and/or footer
- Cross-browser test: Chrome, Firefox, Edge — fix any layout issues
- Validate all forms: required fields, error messages, success feedback
- Check every nav link works — no browser back button needed to navigate
- Organise folder structure: /css, /js, /images, /php — submit as ZIP or hosted link

Deliverable: Final submission — all requirements met and checked off

6-Page Site Map

Page	Name	Key Requirements
P1	Home	Logo, tagline, carousel, video, intro, nav
P2	Portfolio	Table (4+ rows), ordered list, ext. link, alt text
P3	Services	DB admin UI (SELECT/ADD/DELETE/MODIFY/SORT)
P4	Process	Design timeline, ordered + unordered lists
P5	Contact	Contact form + sign-in/up forms, JS validation
P6	About	Bio, Acknowledgement of Country, accessibility, social links

Tip: Build phases in order — get teacher wireframe approval before writing HTML, and complete Bootstrap before adding JavaScript. The PHP/MySQL admin UI can live on Page 3 (Services) or a dedicated admin page.
